# HSBC MSCI World Islamic ESG UCITS ETF

Marketing communication | Monthly report 31 December 2024 | HIWO LN | USD (Acc)

This product is based overseas and is not subject to UK sustainable investment labelling and disclosure requirements.

## Investment objective

The Fund aims to track as closely as possible the returns of the MSCI World Islamic ESG Universal Screened Select Index (the Index), while integrating environmental, social and governance (ESG) metrics. The Fund will invest in or gain exposure to shares of companies which make up the Index. The Fund qualifies under Article 8 of SFDR.

## Investment strategy

The Index is a subset of the MSCI World Islamic Index (Parent Index), and is made up of large and mid-cap companies across 23 developed markets countries, that comply with Shariah investment principles, as defined by the Index Provider. The Index is constructed by applying values- and climate-based exclusionary criteria, this includes (but is not limited to) companies with exposure to: controversial weapons, tobacco, thermal coal mining and breaching the United Nations Global Compact (UNGC) principles. The Fund will be passively managed and will aim to invest in the shares of the companies in generally the same proportion as in the Index. The Shariah committee monitors the Fund periodically and issues an annual Shariah certificate on the Fund's compliance with Shariah principles. The Fund may invest up to 35% of its assets in securities from a single issuer during exceptional market conditions. See the Prospectus for a full description of the investment objectives and derivative usage.

## Main risks

- The value of investible securities can change over time due to a wide variety of factors, including but not limited to: political and economic news, government policy, changes in demographics, cultures and populations, natural or human-caused disasters etc.
- To the extent that the Fund seeks to replicate index performance by holding individual securities, there is no guarantee that its composition or performance will exactly match that of the target index at any given time ("tracking error").
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.

The MSCI ESG Key Issue Score is the numerical, weighted average of MSCI's E, S, and G pillar scores. A higher number indicates a more favourable ESG profile in the view of MSCI.

The weighted averages of the Key Issue Scores are aggregated and companies' scores are normalized by their industries. After any overrides are factored in, each company's Final Industry-Adjusted Score corresponds to a rating.

## Risk disclosures

- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.
- Further information on the potential risks can be found in the Key Information Document (KID) and/or the Prospectus or Offering Memorandum.
